

rust Servo browser engine

Current Status:

- Only few unit tests (~200)
- Manly relies on over 10,000 external standardized integration tests (wpt, css/wg, jquery, dromaeo...)
- Whole test suite is powered by mozillas ./mach
- No test coverage has ever been computed!

Next Steps:

- implement gcov support for rust compiler
- implement own coverage tool (go-style)
- fix bugs, build ref-tests! Maybe use fuzzy testing
